

BoilerLink™

Effective Cloud-Based Control, Allowing You Savings

The industry-leading system that allows you to be proactive instead of reactive.

The Challenges

MANAGEMENT

How do you manage equipment in multiple facilities efficiently?

MONITORING

Do you know what your boilers are doing right now?

EFFICIENCY

Are your boilers running efficiently or are they on 100% of the time?

TEMPERATURE

Are residents complaining when it's too cold but opening the windows when it's too warm?

MAINTENANCE

When was the last time your controls were commissioned?

Don't let inefficiencies or complaints bring you to the boiling point.

Save with our advanced boiler controller and analytics.

The Solutions

BOILERLINK™ CLOUD APP

Low-cost intelligent controls with real-time monitoring through the SensorSuite Energy Cloud. This fully integrated app allows you to manage your BoilerLink™ portfolio on one easy-to-use dashboard. You can expect an average reduction in energy consumption of up to 30%. Also included are emergency warnings through text message and email.

BOILERLINK™ ALERTING

Monitoring is provided 24/7 with alerts if boilers are running too hot or not at all. Weather data integration from local weather sources informs the SensorSuite Energy Cloud to proactively send commands to your BoilerLink™ in the field, to maintain comfort while achieving optimal savings. Enhance your property management experience with meaningful data and analytics.

BOILERLINK™ AI

An intelligent boiler controller which measures not only your boiler, but outdoor conditions and historic performance to create the optimal comfort in your building. Advanced control features connecting up to 14 stages and five modulating boilers on one network. Also adaptable for Heating and Domestic Hot Water (DHW) boilers.

ADDITIONAL FEATURES

- **Warm Weather Shutdown Automation**
- **Multi-Pump Sequencing**
- **Real-Time Alerting Platform**
 - Supply/Return Temperature
 - Outside Air Temperature
 - Selective Room Sensors via SmartPlug™
 - Pump Failures
- **Expand Controls as Needed**
(HVAC Energy Apps)

Buildings Come in All Shapes and Sizes

Whether you're managing a building with 20 suites or 200+ suites, BoilerLink™ offers zone controls that provide flexibility to further improve how heat is distributed, when and where it's needed. The wireless SmartPlug™ product provides real-time in-suite temperature feedback for enhanced energy intelligence.

FREE ASSESSMENT

SensorSuite and Certified Partners provide free assessments to determine whether there are opportunities to realize savings in your buildings. We analyze your bills and your building's HVAC, and provide a return on investment (ROI) estimate based on a payback proposal.

ACT NOW

New government rebates and incentives for energy efficiency provide optimal opportunities. Greenhouse gas (GHG) is one of the largest culprits of global warming, and buildings using natural gas contribute to more than 30% of GHG in the environment. There are a variety of incentives available to help cover the costs of upgrading to more efficient controls.
